 Viewing records

01 EXECUTIVE OPPORTUNITY SUMMARY

Where the viewing data points to unrealised viewership

Four findings, each stated as an observation, an interpretation and the business implication. No causation is claimed.

WEAKEST VIEWING PERIOD

974

Mon sessions vs 1,655 on Sat

WEAKEST CONTENT / CHANNEL

0.0%

Wimbledon share of all viewing

Edit with  Lovable 

Mon records the lowest viewing volume of the week (974 sessions, 9.7% of activity), and Midnight is the quietest daypart at 7.6%.

Volume on Mon sits 41.1% below Sat, which suggests demand is not being met rather than absent.

IMPLICATION An underperforming period is where incremental viewing is cheapest to test, because the audience is already available elsewhere in the week.

Wimbledon attracts only 3 sessions (0.0%) at an average of 0.2 minutes per session.

Low volume combined with a below-average session length indicates limited pull rather than a niche but loyal audience.

IMPLICATION This is a candidate for content review: reposition the slot, or redirect the investment toward formats already proving demand.

WEAKEST MARKET

230

Northern Cape sessions · lowest of 10 markets

Northern Cape generates 230 sessions (2.3%) against 3,654 in Gauteng.

Average session length in Northern Cape is 7.2 minutes, close to the national 9.1 — the gap looks like reach, not appetite.

IMPLICATION Where engaged viewers behave normally but are few, the opportunity is market-specific programming and distribution, not new content genres.

STRONGEST ENGAGEMENT OPPORTUNITY

16.9 min

ICC Cricket World Cup 2011 · average session length

ICC Cricket World Cup 2011 holds viewers for 16.9 minutes on average with 7.7% of its sessions in the high-usage band.

High duration indicates stronger engagement per session, independent of raw volume — a signal of content that earns attention.

IMPLICATION Extending or scheduling more of this content into weak periods and markets is the highest-confidence growth test available in the data.

HIGH-PERFORMING CONTENT · BY VOLUME

Live Events 1,771 sessions · 10.8 min avg

ICC Cricket World Cup 2011 1,465 sessions · 16.9 min avg

Channel O 1,050 sessions · 11.0 min avg

High viewing volume suggests strong audience demand. The top three channels carry 42.9% of all viewing.

HIGH-ENGAGEMENT CONTENT · BY DURATION

ICC Cricket World Cup 2011 1,465 sessions · 16.9 min avg

7.7% of sessions in the high-usage band

Trace TV 952 sessions · 12.1 min avg

4.3% of sessions in the high-usage band

Channel O 1,050 sessions · 11.0 min avg

4.2% of sessions in the high-usage band

High viewing duration indicates stronger engagement, even where volume is moderate.

WEAK PERFORMANCE · REVIEW CANDIDATES

Wimbledon 3 sessions · 0.2 min avg

MK 32 sessions · 1.3 min avg

kykNET 45 sessions · 3.6 min avg

Low volume and low engagement may indicate an opportunity for content review rather than continued investment.

OBSERVED DATA

Viewing is concentrated in 42.9% of sessions across three of 17 channels, while the bottom three together hold 0.8%.

INSIGHT

A narrow content base indicates concentration risk: viewing depends on a few titles, and weak channels are not currently adding reach.

RECOMMENDATION

Investigate content categories adjacent to Live Events and ICC Cricket World Cup 2011, and place the weakest channels under review before renewing them.

VIEWING VOLUME BY DAY

DAYPARTS · STRONGEST TO WEAKEST

Sat and Afternoon viewing are the strongest periods; Mon and Midnight are the weakest.

OBSERVED DATA

Mon records 974 sessions against 1,655 on Sat, and the Midnight daypart holds only 7.6% of viewing.

INSIGHT

The audience is active elsewhere in the week, which suggests the weak period reflects what is scheduled rather than a lack of available viewers.

RECOMMENDATION

Weak Mon viewing creates an opportunity to test stronger or more targeted programming in the Midnight window, using themes from the highest-engagement channels.

04 MARKET STRATEGY

Where are the potential market opportunities?

The purpose is not to rank locations, but to ask where BrightTV might be under-serving potential viewers.

MARKET STRENGTH · SESSIONS

Gauteng	3,654 sessions · 9.1 min avg
Western Cape	1,845 sessions · 9.8 min avg
Kwazulu Natal	1,001 sessions · 9.5 min avg
Mpumalanga	918 sessions · 8.5 min avg
Limpopo	763 sessions · 8.2 min avg
Eastern Cape	690 sessions · 10.1 min avg
North West	344 sessions · 7.6 min avg
Free State	292 sessions · 10.8 min avg
unknown	263 sessions · 8.3 min avg
Northern Cape	230 sessions · 7.2 min avg

AUDIENCE GAPS IN THE WEAKEST MARKETS

Each market's age mix is compared with the national viewing mix. A gap indicates an age group that is present nationally but under-represented locally.

Northern Cape 230 sessions
Largest gap: **Young Adult** viewers, under-represented by **5.5%** versus the national mix.

unknown 263 sessions
Largest gap: **Young Adult** viewers, under-represented by **59.9%** versus the national mix.

Free State 292 sessions
Largest gap: **Adults** viewers, under-represented by **3.4%** versus the national mix.

North West 344 sessions
Largest gap: **Infant** viewers, under-represented by **2.6%** versus the national mix.

OBSERVED DATA

Northern Cape and the other lowest-volume markets show normal session lengths but a different age mix to the national pattern.

INSIGHT

Comparable engagement with lower volume suggests a reach gap rather than a demand gap in these markets.

RECOMMENDATION

Pilot market-specific programming and promotion targeted at the under-represented age groups, and measure whether local session volume responds.

WHAT SHOULD BRIGHTTV DO?

Five actions, each tied to an observed finding. Every item is framed as a test, not a guaranteed outcome.

01

OPPORTUNITY

Mon has the lowest viewing activity of the week (974 sessions), with Midnight the weakest daypart overall.

ACTION

Test targeted programming on Mon, concentrated in the Midnight window, using themes drawn from Live Events and ICC Cricket World Cup 2011.

RATIONALE

Applying formats that already demonstrate volume and duration into an underperforming period is a low-risk way to investigate whether the weakness is scheduling rather than demand.

02

OPPORTUNITY

Viewing is concentrated: the top three channels account for 42.9% of all sessions across 17 channels.

ACTION

Investigate adjacent or complementary content categories around the leading channels before adding unrelated formats.

RATIONALE

Diversifying may help BrightTV meet additional viewing needs while reducing reliance on a small number of channels; the concentration itself is the risk being managed.

03

OPPORTUNITY

Wimbledon and MK underperform on both volume and duration, including inside the weakest period.

ACTION

Place these channels under a formal content review: test alternative scheduling first, then reassess the slot if performance does not move.

RATIONALE

Low volume together with low engagement suggests the content is not competing for attention; testing placement separates a scheduling problem from a content problem.

04

OPPORTUNITY

Northern Cape under-indexes on Young Adult viewers by 5.5%, and unknown under-indexes on Young Adult viewers by 59.9%.

ACTION

Pilot market-specific programming and promotion in these locations, aimed at the under-represented age groups.

RATIONALE

Where a market's audience mix differs from the national pattern, the shortfall indicates potentially under-served viewers rather than a smaller addressable audience.

05

OPPORTUNITY

High-usage viewing accounts for 3.3% of sessions, and the most engaged segments average over 13 minutes per session.

ACTION

Build a retention experiment around these segments: sequence high-engagement content into consecutive slots and measure session length rather than session count.

RATIONALE

Duration is the strongest available engagement signal in this dataset, so optimising for it tests growth in viewing time without assuming new viewers are acquired.

CEO TAKEAWAY

BrightTV's viewing data identifies clear opportunities across programming, content and markets. The recommended strategy is to focus investment and experimentation where the data shows weak performance or unmet viewing potential.

NEXT STEP Test → Measure → Optimise

Evidence base: 10,000 viewing records from BrightTV_-_Full_Data_Set_Final_Work.xlsx, 2016-01-01 to 2016-03-31. Average session 9.1 minutes; 3.3% of sessions in the high-usage band. No subscriber numbers, conversion outcomes or causal effects are inferred beyond what

the viewing data supports.
