OBJECTIVE

EXECUTIVE SUMMARY

BACKGROUND

BrightTV Viewership Analytics was undertaken to support the CEO's objective of growing the company's subscription base during the current financial year.

The analysis uses user profile and viewer-transaction data to understand who is watching, how viewing behaviour varies, what influences consumption, and where opportunities exist to increase engagement and grow the user base.

BUSINESS OBJECTIVES

User & Usage Trends – Understand who uses BrightTV and how viewing behaviour varies across audiences, channels, time and markets.

Consumption Drivers – Identify the audience, content, timing and geographic factors associated with differences in consumption

Low-Consumption Opportunities – Determine what content could be introduced or repositioned during weaker viewing periods.

User Growth Initiatives – Identify opportunities to extend BrightTV's reach into under-served audiences and markets.

KEY BUSINESS INSIGHT

- The opportunity is not simply to increase viewing activity, but to understand what drives consumption and where BrightTV has unmet viewing potential.
- By connecting audience characteristics, content, viewing time, duration and location, BrightTV can identify where programming changes and targeted initiatives are most likely to warrant further testing.

THE SCOPE OF WORK

Integrated Viewership & Growth Analytics for BrightTV

THE OUTPUTS

THE ANALYTICAL WORK

- Analysed BrightTV viewing data to understand user and usage trends.
- Assessed viewing behaviour across age groups, gender, ethnicity and location.
- Analysed consumption across 17 channels and viewing periods.
- Evaluated viewing duration and session behaviour as indicators of engagement.
- Identified low-consumption days and time periods.
- Assessed content concentration and dependency on high-volume channels.
- Compared viewing volume against engagement efficiency across channels.
- Investigated geographic and audience segments with relatively low viewing activity.
- Developed cross-platform dashboards using Excel, Data Studio, Power BI and Lovable.
- Translated analytical findings into content, programming and market opportunities.
- Developed strategic recommendations using a Test → Measure → Optimise approach.

THE OUTPUTS

- **Audience Intelligence**
Understanding who watches BrightTV and how viewing behaviour differs across audience segments.
- **Performance Analysis**
Identifying underperforming periods, content concentration and engagement opportunities.
- **Market Opportunity**
Identifying potential under-served audiences and geographic markets.
- **Strategic Recommendations**
Converting viewing patterns into practical programming, content and market initiatives.

THE KPIs

VIEWING VOLUME
VIEWING DURATION/ENGAGEMENT
CONTENT PERFORMANCE
AUDIENCE OPPORTUNITY
MARKET/GEOGRAPHICAL RESPONSE

A decision-ready view of where BrightTV should focus its next programming, content and market experiments.

THE OUTCOME

EXCEL — OVERALL VIEWERSHIP

WHAT IS HAPPENING

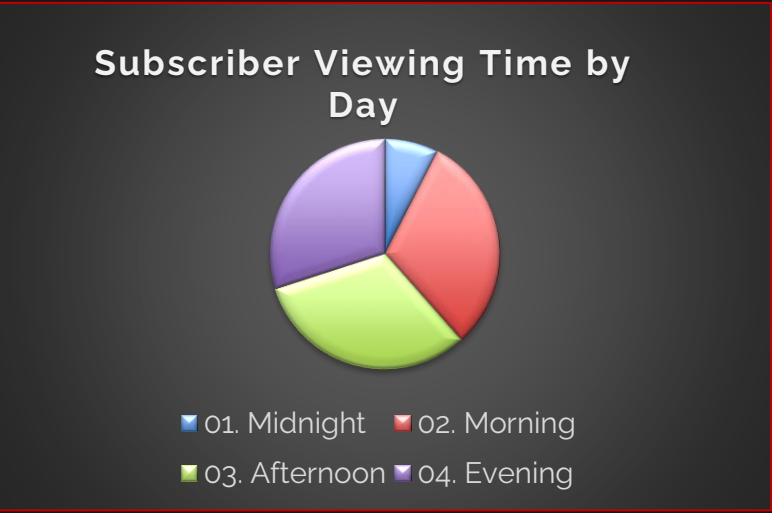

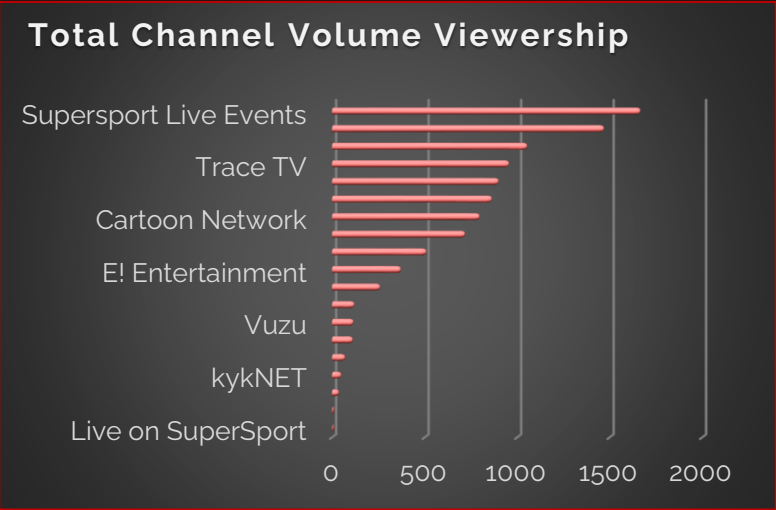

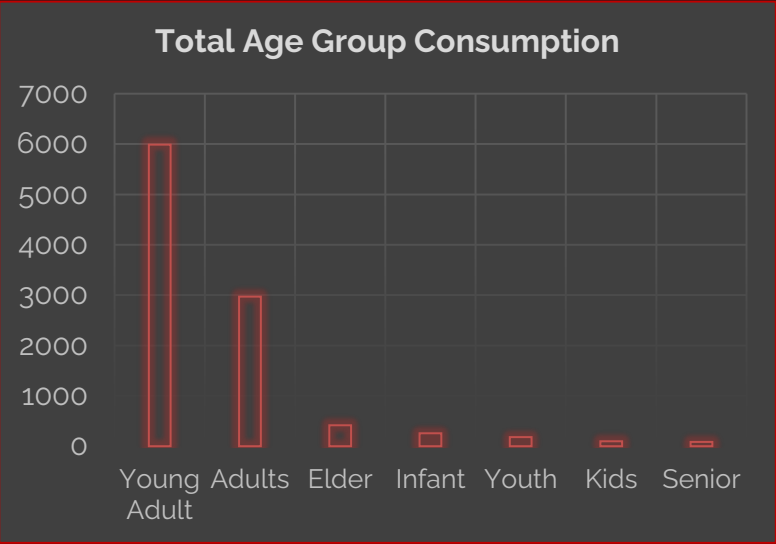

Young Adults and Adults account for approximately 89.6% of viewing records, indicating a strong concentration of viewing activity within these segments. This establishes the core audience while highlighting an opportunity to investigate weaker segments.

ANALYTICAL INTERPRETATION

Young Adults and Adults account for approximately 89.6% of viewing records in the working dataset. This concentration is useful for understanding the current base, while highlighting the need to investigate weaker segments

NEXT QUESTION

What audience, content and timing patterns explain the overall picture?

DATA STUDIO — AUDIENCE INTELLIGENCE

Audience insight

evaluate programming against both the strongest segments and potential under-served segments

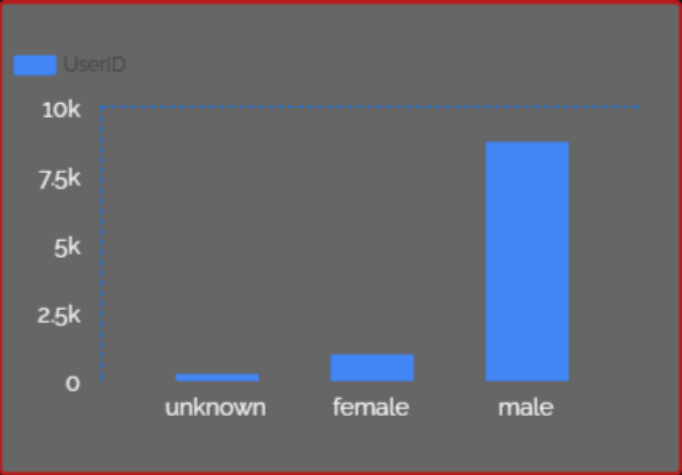

BrightTV's viewing activity

is concentrated within particular audience segments, creating opportunities to align programming and content more deliberately with viewer profiles.

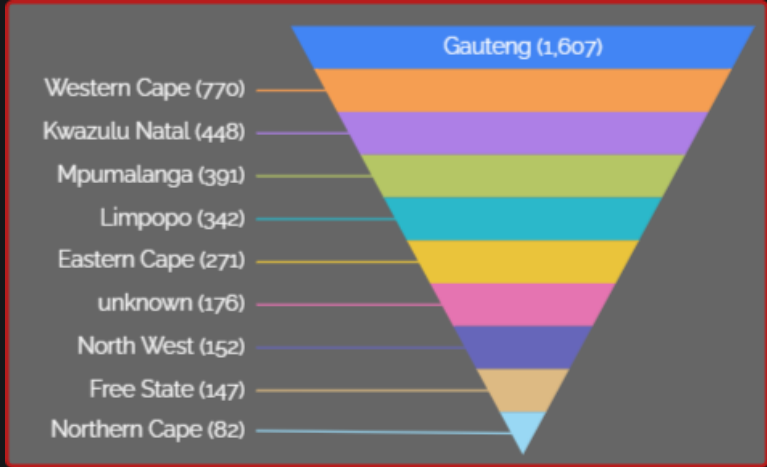

Key transition

However, understanding the audience doesn't tell us where BrightTV is losing potential viewing. For that, I moved into performance analysis."

Gender- Compare behaviour across gender segments

LOCATION: Identify geographic concentration and gaps

Audience Analysis Table- Assess audience diversity and representation

	Age_Group	UserID	Sex	Location	ethnicity ▾
1.	Adults	2,972	3	10	5
2.	Young Adult	5,989	2	9	5
3.	Youth	180	2	9	5
4.	Elder	415	2	9	5
5.	Kids	99	2	7	5
6.	Senior	85	2	8	5
7.	Infant	260	2	1	1

POWER BI — PERFORMANCE GAPS

01

UNDERPERFORMING PERIODS: Which days and dayparts have weaker viewing?

02

CONTENT CONCENTRATION: Is viewing overly dependent on a small number of channels?

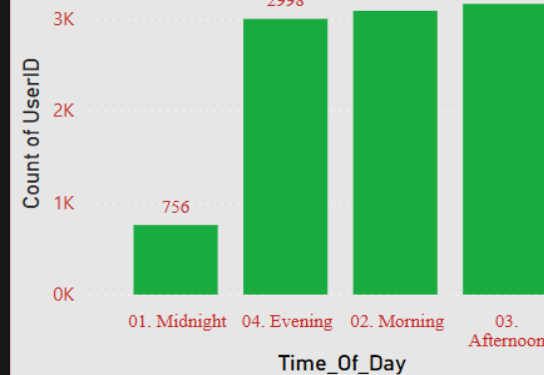

03

ENGAGEMENT EFFICIENCY: Which channels combine viewing volume with longer sessions?

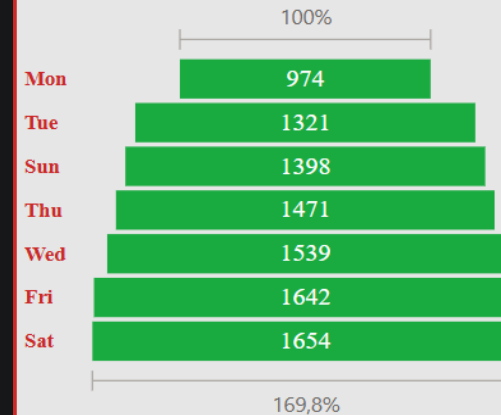

04

MARKET GAPS: Where is BrightTV under-serving potential audiences?

Under Performing Time of Day

Under Performing Days

Which Age Group is under served by our content

Location	Adults	Elder	Infant	Kids	Senior	Young Adult	Youth	Total
Western Cape	710	92		24	20	980	19	1845
unknown	3		260					263
Northern Cape	81	14			7	125	3	230
North West	106	8			5	221	4	344

Total	2972	415	260	99	85	5989	180	10000

OPPORTUNITY FRAMEWORK

Turn performance patterns into priority decisions

GROW / TEST

Use strong-engagement content to test weaker periods and markets.

- ICC Cricket World Cup 2011 — 16.9 min average session
- Trace TV — 12.1 min average session
- Channel O — 11.0 min average session
- Test these content themes in Monday / Midnight, where viewing is weakest.
- Test them in lower-volume markets such as Northern Cape

Take content that already earns attention and test it where BrightTV is currently weak.

REVIEW

Review content showing weak volume AND weak engagement.

Priority review candidates:

- Wimbledon: 3 sessions / 0.2 min
- MK: 32 sessions / 1.3 min
- kykNET: 45 sessions / 3.6 min
- These are not simply "less popular" — they are showing both low reach and low viewing duration.

Test scheduling first. If performance remains weak, reconsider the content investment.

PROTECT & SCALE

Protect the content already demonstrating both demand and engagement.

- Live Events: 1,771 sessions / 10.8 min
- ICC Cricket World Cup 2011: 1,465 sessions / 16.9 min
- Channel O: 1,050 sessions / 11.0 min

- Together, the top three channels account for 42.9% of viewing.

These are proven viewing drivers. Protect their position and explore adjacent content opportunities.

OPTIMISE

Improve high-volume opportunities where viewing exists but engagement can be strengthened.

Focus on:

- High-volume channels/content with shorter session duration
- Monday — 974 sessions vs Saturday's 1,655
- Evening — 2,999 sessions but only 7.6 min average
- Use successful content themes to improve weaker high-volume periods.

The audience is there — the opportunity is to make the viewing experience more engaging.

LOVABLE — STRATEGIC RESPONSE

Translate evidence into action

01

PROGRAMMING

Optimise weak viewing periods

Test high-engagement content in Monday and Midnight windows, where viewing is weakest..

02

CONTENT

Strengthen high-engagement content

Prioritise ICC Cricket World Cup 2011, Trace TV and Channel O formats that demonstrate stronger viewing duration.

03

MARKETS

Investigate under-served segments

Pilot market-specific programming in lower-viewing regions, matched to the age groups currently under-represented in those markets.

Recommendation principle: Treat each intervention as a testable hypothesis — pilot, measure viewing response, then scale what works..

CEO TAKEAWAY

UNDERSTAND → IDENTIFY → ACT → MEASURE → OPTIMISE

BRIGHT TV'S OPPORTUNITY

BrightTV has an established viewing base, but consumption is uneven across audiences, channels, time periods and markets. The analysis identifies clear areas where BrightTV can test programming and content changes to strengthen viewing engagement.

- **Know the audience**

Young Adults and Adults represent the strongest viewing base, with viewing concentrated across specific demographic and geographic segments

- **Find the performance gaps**

Viewing is weakest in Monday and Midnight periods, while some channels demonstrate both low viewing volume and short session duration.

- **Turn insight into targeted tests**

Use proven high-engagement content to test weaker periods and under-served markets, while protecting channels already demonstrating strong demand.

- **Scale what works**

Evaluate interventions through viewing volume, viewing duration, repeat consumption, segment response and market response.

OPTIMISE

BETTER INSIGHTS.
BETTER DECISIONS.
BETTER VIEWING.

STRONGER ENGAGEMENT
Build on what viewers love

SMARTER TESTS
Try in the right places

DATA THAT GROWS
Measure. Learn. Improve.

SCALE WHAT WORKS
Invest with confidence

UNDERSTAND
Know your audience

IDENTIFY
Find the gaps

ACT
Test the right content

MEASURE
Track viewer response

OPTIMISE
Improve and grow

BrightTV doesn't need to change everything. The opportunity is to target low-viewing areas and time periods with content that fits the audience — including stronger family and children's programming. Test what works, measure the response, and build from there.
